

1.1 Standard lap board use with one skater.

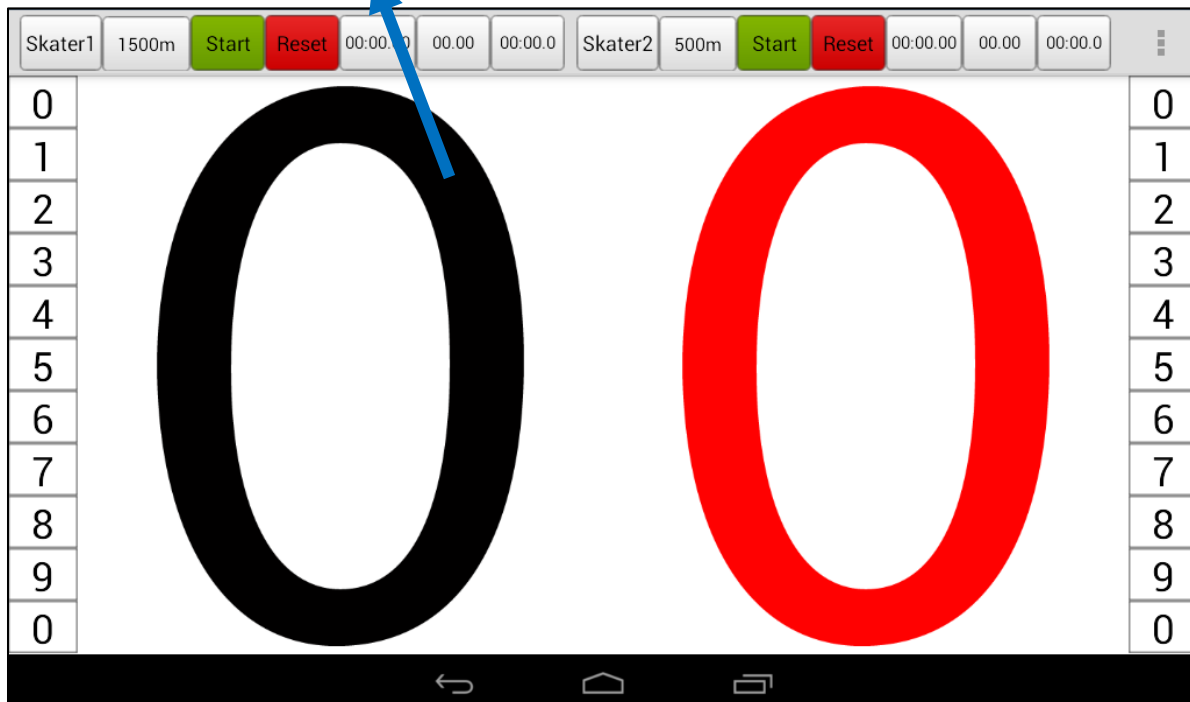

After starting the app you see the start screen, press “Lap board New”.

The start buttons will be temporarily disabled at start, because schedules are being loaded. Press 500m at the top left when loading is finished to select the desired distance.

At the moment the First skater starts press the left start button. The stopwatch shall now start. (this is the box to the right of the "Reset/Stop" button, below indicated with a blue arrow)

Pressing "Lap" will show the lap time in the box to the right of the stopwatch and in the next box the expected final time will be shown. The default setting is that the lap time will be shown at the lap board after 4 seconds, after this time the skater comes close to the coaches. By pressing the digits in the columns on the left en right side of the screen, the 4 seconds timer will be stopped and you can show a different lap to the skater.

It is also possible to input a lap manually (below 33.7) by pressing the digits in the left and right column and after that pressing the “Skater1” button. Because the stopwatch is started at the start of the race, the correct lap can be calculated. (in this case is the entered lap is 23.7, 33.7 or 43.7). The lap is added to the current schedule of the skater en with this information an expected final time is calculated.

Pressing the final time will show the Column schedules screen.

For the time being you can see how this screen works in the 1.0 tutorial. A newer tutorial will follow. Pressing “Lap board New” will bring you back to the lap board without exiting the column schedules screen, so you can use it faster the next time.

If it says “Lap board” instead of “Lap board New”, then you can change this in the setting at the start screen.

Lap Board		ABOUT
10 Lap Board 1.0.000		
Half lap board	Settings	
Lap board		10
Lap board New		10
Column schedules		
Row schedules		
Stopwatch		
Double stopwatch		
Manual input		
Calculate points		
Competition		
Text board		PR

To do this, press “Settings”, then “Application settings”, “Column schedules”, “Different screen button” and select “Lap board New”.
